

INSTALLATION INSTRUCTIONS

ICSS-X-100-4500 Restraint/Isolators are Pre-Compressed products. Isolator Top plate is under pressure caused by compressed springs. The following steps must be followed carefully for proper installation:

- 1. Do not remove** Spacers/Shipping Blocks from isolators until **step #10** as they are the key indicators for proper adjustment on springs
- Refer to submittal package prepared by ISOTECH Industries and locate each isolator based on model # and identification tag provided
- Secure Isolators to the supporting structure using (4) four 5/8" dia. bolts.
 - Refer to submittal package if isolators are supported by concrete structure for anchor size and installation instructions
- Use crane, gantry or other proper lifting machine to elevate equipment and/or equipment supporting structure
- Carefully lower the equipment and/or equipment supporting structure and properly locate it on top of isolators. Use
 - (2) two 1/2" dia. bolts to secure the equipment and/or equipment supporting structure to each isolator
- DO NOT shift or move isolators laterally When equipment weight is supported by isolators.
- Ensure isolator top plate is fully covered by equipment and/or equipment supporting structure as shown in pictures below. For installations
 - where less than 80% of isolator top plate is covered, refer to Step 11 shown on the third page:

10. Follow Star Pattern Sequence until **Spacers/ Shipping Blocks** can be removed easily

11. Installations where Equipment supporting structure or equipment footing covers less than 80% of isolator top plate.

- Add a reinforcing plate, with the same dimensions of isolator top plate, on top of isolator top plate as shown below:

Note:

Isolator's Top (supporting) plate must be reinforced when it is covered for less than 80% by the supporting equipment.

An additional plate, the same thickness of isolator's top plate, must be added to provide required reinforcement

- Continue Installation by following Steps 8 through 10
